

Year 2

In 2CHR we have been busy working within the curriculum area of **Design and Technology**. We have been discovering ways to design an effective farming solution thinking about:

- meeting the needs of a farming problem
- using relevant technology
- Using simple drawings

One of the hands on class activities that we participated in was creating a whole farm plan. We shared out different areas of a working farm and designed what the areas would look like. We were sure to include technologies that we thought would best keep livestock and plants safe as well as helping them grow.

Once we completed our designs, we participated in a whole class discussion about what the best farm lay out would be and positioned our areas. Everyone had such great ideas and input!
