

Year 4 News for Term 4

Reduce, Reuse, Recycle and Replace

This term in geography Year 4 students are looking at how they can be a more sustainable person within their community. They are doing this by exploring the 4 R's (reduce, reuse, recycle and replace) and how they can implement them at home and at school. It has been very interesting exploring all things waste and how they each have a plus and minus influence on the environment. Below are some mosaic pictures the students of 4 NOS and 4MIL have created, along with a sorting activity the students of 4PAY have completed.
