

There has been a lot of hands-on activities surrounding the concepts related to the properties of matter in year 5 this week. We have learnt that heat affects the movement of gas and liquid and several children recreated these experiments at home for Mum and Dad. Keira 5KRO heated milk to see if food colouring would disperse faster in warm milk as opposed to cold milk. Great science Keira! This week we celebrated our successes in science at our annual Science and Technology Expo and many of these concepts were on show. Great job Year 5!
