5DIB's Design Technology

Our design task was to make a bird feeder so birds don't go into our bags and eat our lunch, and so that birds don't choke on the plastic containing our food. It helps us coexist with the birds because we can get our lunch and the birds get bird seeds instead of processed food that could make them sick.

By Mackenzie, Ethan, Liam and Rebis

Our design task was to construct an object to help humans and wildlife coexist. For our Design Technology Assessment we designed and built a sustainable bird house. Our design task helps animals and humans coexist by giving birds a home where they are safe and protected.

By Isadora, Blake and Travis

Our design task was to create a bird perch or swing to help the birds coexist with students in schools because often children scare off other birds and annoy. Sometimes, as soon as they land they have to fly off again. That is why we built this bird swing so that birds have somewhere to land and sit for a while.

By Emily, Dakota, Finn and Tahlia

Our design task was to build something to help wildlife coexist with humans. We created a bird feeder, this ensures birds do not eat plastic off the floor. Instead they can eat out of the bird feeder.

By Zoe, Naikita, Taj and James

Our design task was to build a bird house where all kinds of birds can sit and rest. We built a house that has food, water and shelter. Our design allows birds to co-exist with humans because the birds are not trapped in the house, they can freely fly in and fly out.

By Tiffany, Jenna, Drew and Callum

Our group had to create a bird house for our technology task. We built a safe and environmentally friendly bird house. The task was hard but we eventually got there in the end.   Our design assessment helps the birds coexist in the school grounds because it gives them a sustainable home and shelter to protect themselves from severe weather and humans. It helps give us students more space on The Willows State School ovals which is positive for us and the birds.
