

Geography

The students in Year 4 have been investigating ways in which waste is managed in our local area. We have also investigated how individuals can manage waste more sustainably.

If one person makes a small change, imagine the difference we can *all* make for a sustainable future!

Did you know?

- Alfoil can go into our Townsville City Council recycling bin. Just squish it together to form a tennis-ball sized ball.
- Takeaway coffee cups are NOT recyclable.
- There are soft plastic recycling collection bins at major supermarkets (see REDcycle as an example).

See www.townsville.qld.gov.au for more details.

In 4EVA, we believe that if we educate people on the simple facts about living sustainably, we can make a big difference in our world. Here are some posters that were sustainably created out of our cereal boxes from our English unit.
